

SCOTIA GRENDEL PRODUCTIONS

Scotia News for June

Lots to talk about this month, so I'll try to keep this brief. A real mixed bag of topics covering most areas of interest.

New Releases

This month we decided it was time Grendel deserved a bit of love, so we've dug out some nice little pieces for the accessories range, as well as some obstacle scenery.

First up, the accessories. We have ACR34, a nice set of urns (2 large, 2 medium, 2 small) which go particularly well with our Egyptian scenery, but would also look good with fantasy scenics, or part of a bazaar setting. The pack will be £4 for the set of 6 urns.

Moving away from the ancient feel of urns, we have a modern equivalent in the form of individual steel barrels. The pack, ACR35, contains 3 large and 3 small barrels, again at £4 for the set. ACR21, containing 5 small rectangular radar dishes at £1.75 is also released.

Then we have the larger releases, both with something of a spiky theme to them: A grounded pike wall, 10080, and a pallsade & piles set, 10081. Both packs consist of 3 x resin bases with the commensurate number of metal stakes.

Incoming!

The nitrile mould drought is over, and with our latest delivery, Production moulds will soon be made for the Scotia 1:300th infantry. Hurrah! Expect to see them on the site soon.

Also coming soon, the Grendel Fantasy range will receive some reinforcements with the addition of some 28mm metal miniatures. We have acquired the Legions of the Realm range from Black Tree Design, and will be rebranding and re-releasing the miniatures as part of a generic Fantasy range.

The Price Is Right...Free!

Following the popularity of making the Void 1.1 rules available for free download in the webstore, we've decided to make all our rules sets available for free download. First up will be Kryomek and it's companion volume, Hivestone, followed by the Leviathan rulebook. If you don't already own a copy of one of these games, why not download them and see what all the fuss is about?

Plastic Junkers 101

Jon has been pondering the Void plastics for a while now, and has decided that there's definitely conversion potential in them. Consequently, he's taken it upon himself to write some articles showing what can be achieved with the plastic kits. First up, the Junkers model [here](#). If you would like Jon to do an article about painting the model he's just converted, or have any questions about the modelling involved, [give him a shout](#). Next up will be an exploration of the modelling possibilities of the plastic Viridian Inderdict Marine sprue.

ACR34 Urn set

10080 Grounded Pike wall

10081 Pallsades

ACR21 Nexus Rectangular Radar Dish

ACR35 Steel Barrels

Don't forget, we're always on the lookout for articles we can use in our newsletter. So if you've something to share, be it a painting or modelling tutorial, gaming strategy, or an informative short essay regarding a specific area of interest, [drop us a line](#).
